Reasons for Allowance

The present invention is directed to a recording/viewing support apparatus for predicting the digital broadcasts signal quality due to the weather condition at the time of the programs scheduled and notifying the user the predicting result of the image or sound quality. The combination of Boyer et al (U.S. 6,268,849) and Megata (JP 36-3200689) fails to work for the following reasons. Megata discloses a television tuner, which receives the real/current time television signal. The system of Megata analyzes the image quality of the real time TV signal at the time of rainfall and notifies user the current image quality. Boyer et al teach weather forecast information (shown in figure 7) at the location where the digital broadcast program received. The combination of the two prior arts are not compatible because the TV tuner of Megata can only analyze the real time TV signal, and there is no suggestion in Megata that it can analyze the weather forecast data of Boyer et al shown in figure 7 to predict the image quality in a digital environment.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
